Our Building and Plan Service

E offer this new Book of Home Designs for the purpose of assisting those desiring to build a home of their own, or to improve their present one. These homes are in American Colonial, New England, English Colonial, Dutch Colonial, English Manor, Italian, Spanish or Mission styles, assuring a wide choice in design as well as in size and materials.

The Plans have been prepared by the best architectural talent and combine practicability, distinctiveness of designs and economical construction cost. The blue prints and materials for these homes are furnished by our Company.

¶ Come in and see us and we will be glad to talk it over. Such matters as quotations on materials, labor costs, duration of construction and information on general financing will be gladly furnished. Years of practical experience have brought us in contact with the best contractors, the services of which will be placed at your disposal.

¶ Frequently one has some certain arrangements, or a special feature they desire to have incorporated into the general plans. And, quite possibly, an entirely different arrangement may be desired. In either event, these changes will require but a few days and will be made by capable architects at a small cost.

The homes illustrated are of the most modern design and have a permanent appeal. Nothing freakish, flashy nor faddish has been included. They were selected on a conservative basis which at the same time permitted an adequate variety to express one's individual taste. As a result they are not of a flyby-night popularity but will have a lasting beauty and resale value.

If we may be of service in assisting you with your contemplated building, it will be a pleasure to have you call on us. Should it be more convenient, telephone or write, suggesting the time you would desire us to call. Let us be of service to you.

Which Style of Home?

HE question of style as applied to home architecture is a more difficult and important question than it at first appears to be. No matter how simple or inexpensive a home is to be, if it is to be beautiful, symmetrical, of enduring charm and general appeal it must observe certain fundamental principles and traditions. A mixture of styles or a neglect of style cannot help but result in ugliness and waste. Architectural styles are the results of centuries of thought and experiment. Generations of architects and builders have schemed against useless waste, and have contributed their efforts and talents towards the ends of beauty and comfort. It would be folly not to take every advantage of this wealth of experience.

In selecting the style for his new home, the home builder would do well to keep the following things in mind. First, will this kind of home wear well? Will its style be appealing and will its arrangement be satisfactory, say five years hence? Second, does the room arrangement satisfy all tastes and requirement. Architectural style determines interior arrangement as well as exterior design. Third, can the home be properly executed in local materials? Fourth, will the home be the best for chosen setting and will it harmonize with neighboring houses. Fifth, is the appropriation large enough to do justice to this type of house? Lastly, has the home a general appeal and will the resale value be high?

Fidelity to a particular style does not eliminate all opportunity for self expression. There is sufficient flexibility in any type of home architecture to permit the free play of one's taste and the expression of personality. But if one is to build most economically and at the same time guard against regrets he should select the style of architecture with the utmost care and forethought and see to it that the principles involved are carried out in the main at least. On this page and the next there are illustrations and brief descriptions of the six major types of home architecture. Anyone, contemplating building a new home might profitably study the illustrations and familiarize himself with the specific advantages and particular charms which each one affords.

New England Colonial

Rich in ancestry and steeped in American traditions the New England Colonial home has always had a wide appeal. Its beauty lies in its stately simplicity, dignified classic lines and the homelike atmosphere which it evokes. Because of this structural simplicity it is probably the most ecosimplicity it is probably the most economical of all types to build and looks well in shingles, siding or brick. To be true to precedent the floor plan must be rectangular and the rooms almost square. "Cozy corners," angular additions and irregular additions and almost square. "Cozy corners," angular rooms and irregular additions appear to be out of place and detract from this simple dignity.

New England Colonial

Dutch Colonial

The popular Dutch Colonial home is an heritage from the Dutch Colonists who in their effort to escape the special tax on two story houses in-geniously devised the "gambrel" roof, thus giving all the room and efficiency of a two story house with the appearance of a one story house. The best types are long and low and set close to the ground. To be true to precedent the dormer should be narrower than the first story. Brick, shingles and siding can be used with equal propriety. Above all, let it ramble for the Dutch Colonial home is nothing if not picturesque.

Gothic or Half Timber

The Gothic, or more familiarly, the Half Timber house comes down to us from the England of Elizabeth and the Tudors. The half timbered and stuccoed second story is the most distinguishing mark. The main principle behind the Gothic home is one of frankness, that is, the exterior is a frank expression of the interior arrangement and should be designed to reveal what it conceals. One can go to almost any limits in designing an interior to suit himself and at the same time feel confident that he will have a beautiful home from the outside, interesting and individual.

Gothic or Half Timber

Modern English

This type of home is easy to build and appears to advantage in almost any surroundings. Stucco is the most frequent material used but it has been made to look well in almost any material. The flexibility of the style makes it possible to adopt it to any size lot and on the inside to have almost any arrangement of rooms. The floor plan is first laid out and the elevation taken from it. The large living room is first provided for and the other units made to balance with it. Specifically, the Modern English home is built from the inside out and should make a strong appeal to anyone desiring to inculcate his special ideas into his home.

Italian

The Italian home is a model of architectural symmetry and decorative exquisiteness. It is related to Colonial houses both being modeled on Classic architectural principles. It has, however, an advantage over the Colonial home in that the interior units are not forced into prescribed positions. It is quite possible to arrange the rooms, both as to size and location, in almost any desired way because the windows and doors do not have to be in regular positions as in the Colonial styles. The rich natural decoration is an heritage from the renaissance.

Italian

Spanish Mission

There are certain advantages in Spanish Mission homes found in no other style. They are built around an inner court, or patio, which permits almost any number of any size rooms. Furthermore, each room is a distinct unit and the sleeping and living room can be segregated from the dining room and kitchen. The open court proves to be a most welcome retreat in hot weather and privacy is here had that is hardly possible on the old style American front porch. Despite its present widespread vogue the Spanish Mission home was designed for warm climates and is more successful under those conditions.

When Building—Play Safe! Use Correctly Made Plans

It is dangerous to build without using correctly drawn plans. The building of a home is a delicate and complicated process in which the slightest mistake might mean a considerable loss in time, money and satisfaction. To be more certain of having a "home of no regrets" we recommend the use of carefully made blue-print working plans.

THE PLAN BUREAU is made up of intelligent architects and skilled draftsmen, men who have specialized in designing homes for years, and whose experience and knowledge enables them to produce simple, yet adequate, blueprints for builders.

(See next three pages for specimen of completed plans as produced by experienced craftsmen).

THE BLUE-PRINT PLANS for homes in this book eliminate all guesswork. All dimensions, sizes, details and directions are accurately and completely given. Consequently erection is made easy for the builder. The actual figures show that the size of all lumber, beams, footings, masonry walls, etc., are of sufficient size to carry safely all loads and to withstand all stresses imposed upon them.

THE FOLLOWING ITEMS ARE CLEARLY DEFINED IN ALL BLUE-PRINTS:

Basement or Foundation Plan First Floor Plan Second Floor Plan Front Elevation Right Side Elevation
Left Side Elevation
Rear Elevation
Section Drawings and Details

THE PLANS are usually furnished in three large sheets. On the succeeding pages you will see a sample illustration of the blue-print plans for homes in this book. These illustrations are one-quarter size of actual plans yet they will convey to you the care and accuracy with which the plans are prepared. Play safe and use them.

It is almost impossible to lay down infallible rules for decorating the home. Each problem of furnishing and decorating is an individual one and must be approached accordingly. It is often a help, however, to familiarize oneself with the different possibilities of arrangement of decoration through pictures or from actual observation. The next several pages are merely of a suggestive nature to possibly help the prospective home builder visualize the problems and solutions of interior decorating and perhaps provide the solution for some of your own particular difficulties.

In many homes the visitor receives his welcome in the hall. It is there, also, that members of the family first come under the soothing influence of the home, tired after a day of business, school, shopping or other activities. It is desirable that a friendly, cheerful impression be created by the hall. In general, the color scheme should be close to that of the living room, but light enough to help brighten the hall if it is poorly illuminated.

As a brief color guide the listing on this page and the next is offered:

YELLOW, RED, ORANGE are warm and advancing colors.

BLUE, GREEN are cool and retreating colors.

VIOLET is a neutral color.

The above are strong prismatic colors and only suitable for accent. Such shades as SLATE, CITRON, RUSSET, SAGE, BUFF and PLUM should be used for masses.

WHITE and BLACK can be used but only discriminatingly and in small quantities.

Courtesy of S. Karpen & Bros.

Normal GRAY is a fusion of equal parts of yellow, red and blue and is consequently neutral. Hues of gray are obtained by adding more of any part and are very useful for background.

The important thing in blending is that the colors complement and neutralize one another, keeping some one color predominant, however. For example, if orange is predominant, only colors which harmonize with or are comple-ments of orange should be used.

Use plenty of color — color is life — but strive to keep a color balance.

Courtesy of National Lead Co.

The living room should offer an invitation to relax mentally and physically. Comfortable chairs, shaded lights and soft-toned hangings, draperies and walls will help create the homelike, restful atmosphere so desirable in a living room. For the decoration of the living room walls, tans, medium brown, warm gray, old blue, gray green and other soft colors are excellent.

Courtesy of National Lead Co.

As a substitute for a separate library the arrangement at the left is suggested. Books deserve a place of their own and a 'library corner' in the living room can be made a very decorative and useful place. A quiet secluded corner by the fireside, a good book, an easy chair or lounge will give many hours of relaxation and high adventure.

The living room should offer an invitation to relax mentally and physically. Comfortable chairs, shaded lights, and softtoned hangings, draperies and walls will help create the homelike, restful atmosphere so desirable in a living room. For the decoration of the living room walls, tans, medium brown, warm gray, old blue, gray, green and other soft colors are excellent.

Courtesy of National Lead Co.

The dining room in a home should have a function other than that of merely an eating place. It should by its attractiveness put the family in a happy state of mind at meal time. It should by its charming table appointments and proper room decoration increase the enjoyment of the hours spent there. If gayety and spontaneity of thought prevail during the daily meals, the dining room will have achieved its true function. For dining room walls, such colors as soft old blue, dull orange, gray green, dark tans and rich browns are suitable, if the room is not too dark.

Courtesy of National Lead Co.

The illustrations to the left and below show other possibilities in furnishing and arrangement. The shape of the table, for instance, depends upon the shape of the room—a square table for a small square room. The difference in wall treatment and in such features as service tables, lighting fixtures, floor coverings and style of furniture is dependent upon the architecture and prevailing tone of the house.

Courtesy of Simmons Company

Simple in design and easily arranged, this bedroom is given freshness and charm by its attractive color scheme. Walls are tinted soft peach or apricot. Casement curtains are of sunfast voile or net in ecru of cafe au lait. Valance at top of window is of violet sateen with draperies of cretonne, chintz or printed linen. Bed cover of violet sateen, flounce of soft jade green. Shirred over-spread of thin dotted swiss or dotted net. Deep blue Wilton carpet and cushion on window seat. Slipper stool and lamp shade are in soft rose taffeta.

The picture to the left shows a rich simple treatment of an upstairs living room. Textured walls of Portland Cement are shown.

Courtesy of Simmons Company

Sun porch and sleeping porch in one, this attractive extra room is simple and practical both in furnishings and decorations. The walls are tinted cafe au lait, the casement curtains of pongee, mercerized voile or casement cloth repeating the same color note. The full length curtains are of English mohair casement cloth, repp, poplin or monk's cloth in a rich, soft shade of raspberry, which by day will flood the porch with charming color when drawn. The floor is covered with linoleum giving the effect of warm brown tiles. Braided rug in raspberry with darker border. Green willow chairs, reading lamp with walnut standard and pale rose shade.

An open fireplace could never have a more practical use than in an enclosed porch. The one at right is especially designed for Italian and Spanish homes but can also be appropriately placed in a Tudor or a Modern English home. By placing a chair at each side the monumental effect is increased.

See Next Page

A completely tiled kitchen, as pictured above, insures the utmost in cleanliness and pleasantness for the housewife. The handy arrangement of the different units is to be especially pointed out here.

Pause With Vs a Moment When

The G-E Wiring System

HE comfort your newhome brings you will depend upon its convenience. In these days convenience is, in large part, a matter of electrical service, and the effectiveness of this service depends on the completeness of the wiring installation. Complete wiring is neither complicated nor expensive. If you are preparing to build a new home, you will plan your plumbing system as a unit and you will make sure that it is complete. At the same time and for the same reason, you will appreciate the economy of building a complete electrical system into the structure as it is

A complete wiring installation provides for all the electric lights, for their proper control, and for the appliances that you or a future occupant of your house may some day want to use. The value to a future owner is really its value to youthat is, he will be more likely to buy and to pay your price for a house that meets his electrical requirements. When you install complete wiring, you put into your house a value far in excess of the small sum which it costs-value that will be returned to you in full if you should ever sell, and that will bring its own annual interest if you rent the house.

If this house is going to be your home, you can realize perfect satisfaction only if you are able to make convenient use of

electrical appliances—only as you can change the arrangement of the lamps as often as you desire—only as you make electricity a servant who follows or precedes you from room to room, ready at every point to light your way and lighten your labor.

Complete wiring is the road to a hundred comforts. Electric heating devicespercolators, urns, toasters, grills, and the like are available on the porch or in the sun parlor in summer, in the dining room and the living room at all times, and, when occasion requires, in the bedrooms and sick-room. Electric fans supply cooling breezes and keep the air fresh in any part of the house; electric heaters make cozy the cold corners in fall and winter; while electric curling irons, heating pads, and flatirons can be moved about and used at any convenient point.

There is, too, an undeniable prestige in complete wiring. The hostess whose home is made distinctive by the refinement of soft lights rightly placed, and controlled by the touch of a switch—who can offer her guests dainty dishes prepared in beautiful electrical heating devices—is one whom acquaintances love to visit and whose taste they admire even while they may entertain a little good-natured envy as they appreciate the distinction of her

surroundings.

The handy tumbler switch and the convenience outlet in the hall are parts of the G-E Wiring System. They stand for ease of control and convenience of use.

The G-E Wiring System not only makes ample provision for correct lighting but also for the use of the many electrical appliances that make for comfort and convenience.

You Plan Your Home of Dreams

-for lifetime service

All this enjoyment is made available by the installation of complete wiring.

When you make a purchase on which you depend for lifetime service, your thought is "how good" rather than "how cheap." This is especially true when the best costs but little more than an inferior product. It is in the highest degree true of a wiring installation. You must make the original installation both adequate and convenient. You will never see the most important part—the part that is hidden behind the walls; you cannot inspect it before buying. How then shall you choose?

One sure and safe way is to specify a

G-E Wiring System.

The G-E Wiring System is a system of housewiring each part of which is designed and made by one manufacturer, the General Electric Company. A system of housewiring in which adequate outlets conveniently controlled render a complete and permanent service.

The G-E Wiring System is a unit installation planned by leading architects and engineers, each part of which is de-

signed and made to fit the other.

The G-E Wiring System is installed by a group of electrical contractors who are equipped to plan for adequacy, convenience and lifetime service.

Material is guaranteed by General

Electric.

The result is a wiring installation—a G-E Wiring System—made up of quality material assuring safety, permanence and full value for money expended. An installation providing for adequate control and proper distribution of light through proper location of outlets and switches. An installation which assures convenient sources of current for lamps and appliances.

To aid you in planning the wiring of your home, a forty-page book has been published. This book, *The Home of a Hundred Comforts*, is a treatise on housewiring containing a description on the proper layout of the wiring for each room, and in addition, detailed floor plans showing the application of the general principles contained in the descriptive matter.

You may obtain a copy by addressing the Merchandise Department, General Electric Company, 1285 Boston Ave., Bridgeport, Connecticut. Write for your copy. Study it. Learn how convenient

electrical service can be made.

Go to an electrical contractor who installs the G-E Wiring System and with the aid of *The Home of a Hundred Comforts*, plan with him the wiring of your new home. Wires laid back of lath and plaster are there to stay. Do it right. Install a G-E Wiring System—for lifetime service.

The heart of the home where the G-E Wiring System amply provides for all the convenience essential to comfortable living.

Here, with every thought for the comfort and convenience of the woman of the house the G-E Wiring System proves its value.

Hints on Bath and Kitchen

Tile Bath Increases Value

An exceptionally successful builder of moderately priced houses was recently asked what features of construction or equipment he considered the most important for the quick sale of a house. Without hesitation he answered: "Good hardware at the front door, adequate heating equipment, and above all a tiled bathroom." He further explained that he had found in his experience it was far easier to dispose of a house even in the middle of a block if it had a tiled bath, than to sell the corner houses with ordi-

One of the Popular White Rooms

nary painted bathrooms. This merely goes to show how thoroughly the tiled bathroom idea has taken hold in the minds of the home builders of America, and how much an attractive and sanitary bath adds to the value and comfort of a home. It is indeed common knowledge among real estate men and builders that tiling the bathroom adds several times more to the real estate or re-sale value of the house than the actual cost for the tilework involved in it. This explains also why the newspaper columns of houses for sale are filled with references to "tiled baths" as a feature and a point of desirability.

Height of Wainscot

Since the cost is relatively so small in comparison with the total cost of the house, every home builder

should plan from the beginning on tiling the floor and the walls of the bathroom to a height of at least four and a half feet. From a practical standpoint, the best height to which the wainscot should be carried is, however, the top of the door and window trim. This height gives complete assurance against splash marks which would otherwise have to be reckoned with where a lower wainscot leaves a relatively large plastered or painted surface subject to dampness and requiring painting from time to time. The ideal way would of course be to tile the room completely, ceiling included, which is now done in a great many houses planned for low cost of up-keep, convenience, easy cleaning and general attractiveness. But even a low tile wainscot provides the essential protection, sanitation, desirability and attractiveness, which the average home builder desires and needs, and which he has every reason to think of when deciding upon the finish in the bathroom.

White Rooms

Everyone is thoroughly familiar with the sparkling white tiles which have become almost a standard in making good bathrooms. We all know the 1" hexagonal and 34" square ceramic mosaic tiles which simply won't wear down, and the 6x3" brilliantly glazed wall tiles which never seem to need cleaning. These all-white bathrooms have been popular for so long that nothing additional need be said in their favor. This well-known type is still by far in the majority. White is so easily and thoroughly associated with cleanliness! And by the way, white tiles are the cheapest.

Colored Tiles

But, as in so many other directions, there has been progress in bathroom tiling. A bit of color in the floor pattern, perhaps a touch of color below the cap or above the cove base, were the first signs of a change; and now bathrooms are frequently done entirely in colored tiles. Delicate pastel tints, slightly

The Latest in Bathroom Heaters-Matches Tiling

variegated in tone, with a satin-matt finish, are now produced by the Mosaic Tile Company of Zanes-

ville, Ohio, and these have resulted in an entirely new trend in the treatment of bathroom tiling. By the mere choice of color, the bathroom and shower effect may thus be decidedly "warm" in appearance,

Example of Mosaic Faience Mantel

or on the other hand held to a refreshing, crisp coolness. The same company produces floor tiles of the unglazed and glazed types to match or harmonize with these satin-matt wall tiles; and to complete the effect, the bathroom accessories, such as soap-dishes, tumbler and tooth brush holders, towel racks, and even the bathroom heater, are produced in "All-tile" accessories to match the tiling in color and finish, which any established tiling contractor can supply and install. It should be mentioned right here, that the selection of the proper make of tiles and accessories—whether in white or color—is an all-important point in obtaining satisfactory tilework, and specifications should clearly state the make, and be rigidly enforced and verified.

Tiling in the Kitchen

These same tiles and accessories are suitable and serviceable for the many other rooms and uses which experience and modern practice have designated as advantageous. Twenty-five years ago a tiled kitchen was the exception. Today it is found in so many houses that every home builder must seriously consider the advisability of providing his home with this feature and thereby have his wife enjoy the advantages which tiling of the kitchen brings to her. The same principles which apply to the tiling of the bathroom, and in many ways the same reasons, are applicable to the kitchen. The wainscot should be high enough to be effective and conserve time, energy and up-keep expense. The tile floor should be of a practical color and pattern. Cupboards should be set upon a tile base. A recent development is the tilelined cupboard with glass shelves.

Fireplaces

Quite a noticeable change has also come in the tiling of fireplaces and mantels since satin-matt and faience tiles were introduced by the Mosaic Tile Company to fit the practical and decorative needs of such usage. Aside from many attractive stock mantels and facings, this company is prepared to supply special designs to fit any type of room. Another interesting novelty is the grille tiles, which provide an effective and attractive means of concealing radiators in the wall or under window seats.

The rich and colorful tile effects which the sunroom requires, may be obtained with "Ironstone" tiles, Mosaic Flint tiles, and Faience. For porch, vestibule, hall and dining room, these same tiles offer unlimited possibilities for distinctive and permanent floors.

Proper Installation Essential

All of these tiles are easily obtained and the suggestions readily carried out by tile contractors. Home builders are cautioned to have all tilework done through regular tile contractors, since proper installa-

Modern Bathroom with Floor and Walls of Colored Tiles in Satin-Matt Finish

tion is essential to satisfactory results. Long experience has established the economy of this procedure, and the Mosaic Tile Company therefore holds itself ready to furnish names of tile contractors when requested.

How to Heat the Small Home or Other Building

When planning your new home, of course, you want to give careful and thoughtful consideration to your heating system.

Poor heating may keep your home from being the cheery, comfortable place that it should be. It can make it a cold, unhealthful, and unpleasant place to live in.

Institute of Thermal Research of the American Radiator Company

For thirty-four years the American Radiator Company has put its combined scientific and mechanical skill and its vast resources into the problems of keeping the nation warm. In order that the science of heating may be furthered they have established and maintained the Institute of Thermal Research, the largest heating laboratory in the world.

Among the problems scientists have studied here was that of constructing a small, efficient unit capable of heating homes of from three to five rooms with no more fuel than the old-fashioned heater used in heating a single room.

After a long period of study and experimenting, the Ideal Vecto Heater was perfected. This remarkable product was especially designed to heat, with high efficiency, small dwellings, offices, garages, and other buildings up to 8,000 cubic feet capacity.

Warmth from the Ideal Vecto Heater is the very nearest approach to the perfection of that of the Ideal Arcola Heater and American Radiators that modern science has been able to develop without the actual use of radiators.

Heating Your Entire Home by Air Circulation.

The Ideal Vecto Heater is a warm air heater, a single heating unit, new in principle and construction. It is a scientific application of nature's way of spreading warmth.

That is why it is so efficient as to warm an entire small home while consuming only the same amount of fuel as is ordinarily used to heat one room.

Old-fashioned heaters sent out heat by radiation. Near them it was intensely hot, but near the walls and in the other rooms it might be cold and draughty. The heat was uncontrolled. Fuel was wasted, comfort sacrificed, and health endangered.

Air is drawn at the base of the Ideal Vecto Heater, and brought into contact with a scientifically designed heating surface; being warmed, the air floats upward and outward, carrying its warmth to every corner of the house. The process is continuous and causes a gentle suffusion of even, comfortable warmth to every room. Large volumes of air are continuously warmed and circulated at moderate temperatures. Warmth from the Ideal Vecto Heater is comfortable and healthful, for the vital qualities of the air are not burned out.

The Ideal Vecto Heater eliminates the expense of cellar construction, a decided saving in the building of your home.

The question, "Would a heater look well in my living room?" may come to your mind. The Ideal Vecto Heater was designed to harmonize perfectly with any interior. It is a beautiful piece of furniture. It is small and compact and is so constructed that the fire-lights shine through the window glowpanels in front with all the cheer of an open fire. These panels are made from a chemically prepared glass mixture, that safely resists the hottest temperatures without flaking or breaking.

The jacket of the Ideal Vecto Heater is of sheet steel, finished with a lustrous enamel—as bright as the glow of china. This finish is porcelain enamel, baked on at a very high temperature, and is unaffected by heat.

Because of its one-piece, seamless construction and special regulating device, the Ideal Vecto Heater insures perfectly controlled combustion. Every possible heat unit in the fuel is made available, at controlled rates, for heating service.

This feature, united with the extensive, scientific design of the heating surface, accounts for the efficiency of the Vecto. It will do the work of several old-fashioned heaters combined, and will save its cost many times over by its economy in fuel consumption.

It is difficult to evaluate its service in terms of better health, genuine comfort, and convenience. It is an investment that will pay good interest throughout your life.

Economy and simplicity in operation are two vital features of your new heating plant that you should consider.

The Ideal Vecto Heater offers you both in the highest degree—for a small control handle in front of the heater will give you just the right amount of heat and circulation to keep your home warm and com-

fortable at a minimum fuel cost. No more fuel is burned than is necessary. Its scientific construction makes it actually possible to heat from three to five rooms for the usual cost of heating one room in the old-fashioned way.

Safety in operation is another feature worthy of consideration—especially for a home with children. A housewife may do her shopping at her leisure knowing that the children may play around the Ideal Vecto Heater with perfect safety. The inside construction of this heater is an accomplishment in the foundry art, for it is east in one single, seamless piece.

one single, seamless piece. There are no joints or crevices through which any gas or dust can escape into the home.

The Ideal Vecto Heater is equipped with a Lock Safe Fire Door which, when closed, effectively seals the fire. Not only do these special features insure safety, but they also guarantee positive economy in fuel consumption—a real item for you to consider when you are budgeting the upkeep of your new home.

The question of availability of fuel supply need never disturb you. The Ideal Vecto Heater will burn hard coal, soft coal, coke, or wood.

A special wood-burning grate has been designed for those who use this type of fuel primarily. This

Special Wood Burning Grate

grate is sturdy in construction and has well-spaced perforations. Only a limited amount of air is allowed to pass through, for wood in itself contains much oxygen. Combustion is controlled, therefore, at any rate desired, and

the hot embers are prevented from dropping through. Less wood and less attention are required.

Simple to Install.

To install the Vecto Heater requires no ripping up of flooring and no special piping. It is a self-centained unit. The rear smokehood with damper control is provided as a regular part of the equipment, and need only be connected to a chimney. This is accomplished in a few minutes. The fire may then be lighted, and soon the rooms in your home will be comfortably warm. The Ideal Vecto Heater will ever be a protector of the health and comfort of each member of your family.

Six Exclusive Features of Design and Construction.

By way of summary, these Special and Exclusive

features of Design and Construction of the Vecto Heater:

1-Scientifically Designed Heating Surface.

The body is cast with high projecting fins, giving an

unusually large heating surface for the volume of space occupied. There are many more square feet of heating surface in the Vecto Heater than in any other known heating apparatus occupying even approximately a similar a mount of space. Large volumes of air are warmed at moderate temperatures, and the vital, healthful qualities of the air are preserved.

For more or less heat this handle need only be turned on the graduated dial. The Ideal Vecto Heater responds

quickly with the desired flow of warmth. No bending or fussing with a damper is necessary.

3-Gas-tight, Dust-proof Construction.

The entire body is cast in one seamless piece. Excess air cannot filter inward, nor can dust or gas escape into the home. Cleanliness of operation is insured.

4-Lock-safe Door.

This novel feature seals the fire tightly in front and makes it impossible to force it in any unsafe or wasteful manner. Its contact facing is especially machine-ground, virtually as smooth as marble.

5-Beautiful Enamel Finish.

The finish is gray, porcelain enamel, baked on at high temperature. It glows like polished china, and its beauty is practically everlasting. The Ideal Vecto Heater harmonizes with any interior. It is truly a decorative ornament in any room.

6—Window Glow-Panels.

Made of a special, chemically prepared mixture, the glow-panels allow the fire-lights to shine clearly through, giving the cheer of an open fire. They do not flake, and resist all fire temperatures.

Coal Burning Grate

EASILY PURCHASED

The cost of the Ideal Vecto Heater is only ninetyseven dollars. It may be obtained for an initial payment of ten dollars—the balance in convenient monthly payments arranged through a local heating contractor.

Radiator Warmth for the Home or Other Building

It is a well established fact that a good radiator heating system is the best and most permanent of heating plants. It is the most healthful, most economical, and most durable of all systems and greatly enhances the resale value of your property.

Radiator Warmth and Health

If you were to place a plant in a room where the air is sufficiently warm, but dry, it would soon wither and die. Or if you were to place it in a moist, but cold atmosphere the result would be the same.

Radiators communicate mild, controlled warmth to the air about you instead of intensity heating and drying out the air at one central place. The Ideal Arcola heating outfit supplies this healthful warmth. Its value in helping you to keep healthy can not be over-estimated.

The Ideal Arcola-Hot Water Radiator Warmth for the Small Home or Other Building

The Ideal Arcola Heating System, manufactured by the American Radiator Company is a complete hot water radiator plant that requires no basement for installation. If desired, however, the Arcola Heater may be placed in a basement with connected radiators upstairs. It heats your home with the same degree of efficiency either way.

In homes without cellars the Arcola Heater can be installed in any room with a chimney construction. It is so attractively designed, so compact that it can be installed in your parlor.

The Arcola Parlor Heater, as distinguished from the Arcola Heater is equipped with a beautiful, lustrous French Gray jacket which is easily dusted and permanently bright. It harmonizes with any interior and adds to the decorative value of the living room. The Arcola Parlor Heater is fully equipped with automatic regulation. Its cheery glow enhances the coziness of the

Uniform, Even Warmth

The uniform circulation of warm culation of warm water through the Arcola system prevents what is known as "spotty heating." Although the Arcola Heater operates on one fire, its heat is not spent in warming only one room as is the case with certain types of old-fashioned heaters. Arcola burns less fuel than these old heaters and at the same time distributes the warmth produced evenly, uniformly and at comfortable temperature throughout your home. water through the

How It Operates

The operation of the Arcola Heater is very simple. The fire is completely surrounded by a water-backed heat absorbing surface. When the water becomes heated it becomes lighter in weight per unit volume, rises and flows through the radiators. The radiators, in turn, warm the surrounding air and circulate it through the home; while the water, being somewhat cooled, flows back to the Arcola. The process is continuous. The entire body of water in the Arcola and the radiators is kept in constant circulation. This insures warmth in every corner of your home.

Radiator Warmth for Larger Homes or Other Buildings

If you are planning to build a larger home you should carefully investigate the Arco Round Boiler. This boiler is by far the most popular round boiler for medium and large size homes. It is built by the American Radiator Company and is guaranteed in every respect as the most efficient and economical boiler of its kind. Heating contractors, engineers and achitects universally endorse it as standard among heating boilers.

The Ideal Arco Round Boiler

Large Capacity Reduces Attention to a Minimum

The large fire pot furnishes ample fuel capacity. It gives you the convenience of a long burning fire that requires very little attention. It permits the "banking" of an all-night fire with positive assurance of early morning comfort.

Automatic Regulator Maintains Even Heat

The Arco all metal steam regulator is a vast improvement over old-time regulators having rubber diaphragms. The Arco Bellows lasts as long as the boiler. The regulator automatically controls the fire and thus eliminates the trouble of running up and down stairs, insures even heating, and saves fuel.

Simple and Compact

The Arco Round Boiler is compact with pleasing lines, free from a multitude of chains and levers. There is nothing on the front of the boiler except two large doors, one for feeding, and one for cleaning out ashes. The ash-pit of the boiler is large, and requires less frequent cleaning than that of the ordinary boiler.

Exclusive Third Nipple Feature Insures Quick Heating Response

This is the only round boiler with a "third nipple" construction. This extra connection between sections establishes a free and rapid water circulation that gives quick heating response. Risk in purchasing heating equipment is absolutely removed when you purchase an Ideal Boiler. For years and years Ideal Boilers have been subject to tests in process of manufacture, complete laboratory and factory tests, and finally, practical proofs as experienced by owners from actual service operation.

Constant Hot Water for Every Need at Lowest Cost

Exclusive Features of Construction

Arco Tanks for Hot Water Supply are built in sizes to fit every need. Each Tank is made of ½-inch cold-rolled steel and is galvanized inside and out to prevent rust and corrosion from chemical elements, sometimes found in water. A special flush out plug at the base of each tank allows it to be washed free of any sediment that may have been precipitated.

The past few years have seen a steady decrease in the gauges of the metal of the usual hot water storage tanks on the market, due to keenness of competition and the desire to make the selling price of individual tanks as low as possible. But the life of a thin gauged tank is only a few years, and the owner must then undergo not only the bother, but the added expense of replacement. ment.

andergo not only the bother, but the added expense of replacement.

Arco Tanks with their ½-inch cold-rolled steel shells, galvanized on inside and out, insure a length of service far in excess of that of any ordinary tank.

Each is tested under two hundred and fifty pounds hydrostatic pressure. Perfect service is, therefore, guaranteed in any part of the country, under any working pressure.

Surrounding each Arco Tank is a beautiful jacket made of sheet steel and finished with a fine, lustrous grey japan, easily dusted and permanently attractive. The door and platework are finished in a jet black porcelain enamel capable of withstanding all fire temperatures yet retaining always its deep lustrous glow. The surfaces of the fire-chamber and the fire-door are ground to smoothness by special machinery, a finish exclusive with Arco products. When the door is closed, an air-tight construction is formed. Cleanliness of operation is insured. A sturdy ash-pan, which fits snugly into the fire pot under the grates, is provided with every coal burning model.

Efficient Heat Insulation Prevents Heat Loss

Each Arco Tank is like an immense thermos bottle. The space between the body of the tank and the exterior metal jacket is sealed tightly, and encloses a layer of dead, non-circulating air, one of the best insulators known.

This feature means you can enjoy a cool kitchen and at the same time have an abundance of hot water for every need, for Arco Tanks retain almost every particle of heat within the tank.

A Self-Contained Unit for Either Coal or Gas Burning

lete range for laun-bath, or any other complete use.

Can Be Connected to Heating Plant or Kitchen Range

If desired you can operate this hot water supply tank as an auxiliary to your heating plant or kitchen stove in the winter time. In the warm spring and summer months it can be again easily turned into an efficient individual unit.

Selecting the Right Size—Coal-Burning

30 gal.—For small homes: one bathroom and kitchen.
40-50 gal.—For medium sized homes: one bathroom, kitchen, and laundry.
60 gal.—For larger homes: one or two baths, kitchen, pantry; duplex apartments.

DESTLING within the sylvan confines of one of our vast forests, perched on the rocky ramparts of one of our mountain spires, or snugly resting within the more settled portions of our country this type of Old English architecture is eminently suited; it is at once cosmopolitan and rustic, lends charm to its natural surroundings and benefits by that charm.

The Joy and Economy of Beautiful and Efficient Plumbing

The Wheeling Sanitary Mfg. Co., of Wheeling, W. Va., manufacture a complete line of plumbing equipment including Water Closet Bowls, Flush Tanks, Lavatories, etc., of Vitreous China; Bath Tubs, Lavatories, Laundry Trays, Drinking Fountains, Kitchen Sinks, Urinal Stalls, etc., of Semi-Vitreous Porcelain; Bath Tubs on feet and on base, Lavatories, Kitchen Sinks, and the Combination Bath of Enameled Iron. On this page and the next you will find some examples of this superior plumbing illustrated and described.

The two essential qualifications to keep in mind when selecting your plumbing are beauty and efficiency. It should be beautiful, not only for your own satisfaction, but because the bathroom and kitchen are two of the main show rooms in the modern house or apartment. It should be efficient because plumbing is your most useful servant. Constant repairs are not only annoying but costly, so be sure and specify the best.

Plate 328-E Enameled Iron. One-piece Kitchenette Sink. 42 x 20 inches.

Plate 128-E
Vitreous China. Reverse Trap Syphon Action Water Closet
Combination.

For the all-white bathroom the fixtures illustrated below are most suitable.

Plate 126-E

Vitreous China, Syphon Jet Water Closet Combination. High class all-white trimmings. Silent in action.

Plate 86-E and 101-E
Semi-Vitreous Porcelain or Vitreous China Lavatories.
18 x 20 inches and 20 x 24 inches.

The items illustrated on this page are but a few examples of our complete plumbing line. We manufacture everything that will enable you to have the perfect bathroom and kitchen. For booklet illustrating and describing our products address

The Combination Bath

The COMBINATION BATH is an entirely new departure in the development of modern sanitary comfort, comprising, as it does, a SEAT, FOOT, SHOWER and CHILD'S bath, all in one.

It possesses many essential common sense features not found in any other types. For instance, it is more comfortable and less wasteful of water; it is possible to bathe and treat the feet without the removal of all clothing, by having only a small amount of water in the foot section. The ledges on the end and both sides of the foot section enable one to treat the feet conveniently, while the dimensions of the foot section allow ample space for the feet when standing or sitting. The mother or maid can bathe a child in comfort under ideal conditions. The child can be bathed on the seat section, and then, if desired, dipped in the water filled foot section.

Remember, when you are considering the length of the COMBINATION BATH in comparison with other kinds or styles, that you do not assume a half reclining position when using the COMBINATION BATH, but instead a sitting position; so that your length from knee down does not count in the length of the space required as it does when using the ordinary bath; also that the uncomfortable, cramped position assumed in the latter case is entirely removed and supplanted by a natural, comfortable posture, such as experienced when sitting in an easy, comfortable chair with just as much room in every direction as a person would have in using the ordinary bath of greater length.

Furthermore, when the COMBINATION BATH is used as a shower bath it is equal to any standard type shower receptor. The arrangement of the seat and foot bath permits the taking of a head or body shower bath, the latter without wetting the hair. This recommends it, and is a feature which should not be too lightly regarded; in fact, we strongly recommend installation of showers in connection with the COMBINATION BATH.

In planning bathrooms, space saving is ofttimes a most important problem, which can be readily and satisfactorily solved by the adoption of the COMBINATION BATH. This is all accomplished without encroaching on the space required for persons weighing as much as 250 pounds to an extent that comfort is sacrificed in any degree.

Plate 30-E

Semi-Vitreous Porcelain Ware., 44 x 30 inches to tile in right or left hand corner, or in recess. Glazed white all sides. Only one size made.

Plate 10-E

Enameled Iron Ware, 44 x 30 inches to tile in recess, only. Enameled white front. Waste in foot section either right or left hand end. Only one size made.

Thos. R. Bishop, Architect, 35 S. Dearborn St., Chicago, Ill., says: "In response to your recent verbal inquiry as to what prompted me to specify and have the forty Plate 10-E Combination Baths installed in the Mira-Mar Hotel, located 6222 Woodlawn Ave., Chicago, the early part of 1925, would say that I recognized that this bath would enable me to effect a considerable saving in space without at the same time sacrificing in any degree the essential factors so necessary to a well equipped bathroom. I am pleased to be able to say that this faith in the Combination Bath was not misplaced. The best evidence I can furnish to substantiate this statement is to cite the fact that the hotel is now being enlarged, and an additional sixty Combination Baths will be installed; whereas the regulation 5-foot bath, of which there was a considerable number installed in the original building will be omitted. Furthermore, and for your future guidance, would say that I am specifying, and there will be installed, about one hundred of the Combination Baths in a hotel to be built this year at Lake Park Avenue and 46th St., this city."

Wm. T. Lackey, Manager Hotel Mira-Mar, Chicago, states: "I confess having entertained some misgivings at the outset as to how the average guest would like the Combination Bath. However, this uncertainty was soon dispelled, and I was fully reassured that we had made no mistake in equipping such rooms as we did with them. As a matter of fact, the mistake we made was that we did not equip all the bathrooms with the Combination Bath and shower, instead of the regular baths that were used to a considerable extent. As you know, in the addition we are now making to the hotel all bathrooms will be fitted up with the Combination Bath. It goes without saying this would not be the case if we were not thoroughly satisfied that the Combination Bath is superior to any other type."

We have given a detailed description of the Combination Bath on this page. It is impossible, however, to give complete details of our full line of Plumbing Fixtures in such a small space. Please write us for descriptive booklet.

Homes for Corner Lot Consult us regarding any plan which you may select and we will show you how it can be made suitable for a corner lot.

Notice how the beauty of this magnificent entrance hall is enhanced by the appearance of the clothes closet, with its K-V Fixture ready to receive the wraps of the family and their guests. No electric light is necessary—the K-V Fixture carries the coats into the light of the hall. Without the installation of the efficient K-V Fixture this space would be too small to be of any practical value as a proper receptacle for garments of any kind.

Modern Homes Demand Space Saving Clothes Closets

Clothes Closets of the Horrible Eighties

Clothes closets of yesterday! Remember? The door swung open, revealing a pit of cavernous darkness in which one groped for garments hung in blind disorder. Wrinkled! Shoes on the floor, hooks that were never quite decided whether to stay in the wall or collapse the moment a garment was placed on them! In the summer this large "roomy" closet was the happy home, incubator, and playground of moths, eating through Dad's flannels, through his Sunday suit at a strategic point, perhaps nibbling at mother's dresses—

Abuses Excused

Disordered, chaotic, untidy, often dirty as these closets were, they carried a one-word apology and explanation always brought forward in their defense. They were "roomy." One wonders just what was meant by "roomy." If roominess meant waste floor space they assuredly were roomy. Some of them were the size of today's sun parlors. But the old time closets weren't sanitary, weren't convenient, and had only a small garment hanging capacity. Plainly they represented a prodigal waste of usable floor space.

Housewives Everywhere Revolt

A revolution in clothes closets had to come—and did. A people en-

joying radios, automobiles, living in well-heated, well-appointed modern homes weren't going to endure 1880 clothes closets any more than they would put what-nots in the parlor, drive a surrey or listen to the talking machine. The old-time closet was outmoded—a survival of another age. It vanished, to be replaced in a million American homes by a smaller but more convenient closet equipped with the K-V Clothes Closet Fixture.

Order Out of Chaos with K-V Fixtures

The K-V Clothes Closet Fixture is a roller bearing trolley, patterned after the garment carriers used in clothing stores. Hangers are attached to a movable

steel rod operated by a handle. A few minutes with the screw driver installs the fixture permanently.

Open the door of today's clothes closet! Garments hanging in neat, orderly array are seen. A pull of the handle brings all the clothing into the light and air of the room, ready for selection, every garment swinging on an individual hanger, neat, unwrinkled, still pressed, still smart. Each time a garment is selected or replaced all clothing is brought into the light. And selection is made easy because there is a place for everything, and everything is in place. Moths shun sunlight and fresh air—no destruction from that source! The neat row of cloth-

ing hanging from the fixture of shining pressed steel appeals to every housewive's sense of orderliness. Pressing and tailor bills, which put such a substantial crimp in so many family budgets—are cut in half.

Meeting Today's Demand for Floor Space

Small clothes closets have become an economic necessity in the building of new homes. Yet, in many instances, valuable living space has been utterly destroyed by the construction of larger-than-necessary closets. The row of hooks around the wall have been supplanted to a certain extent by a wooden bar or pole extending from one wall to the other. While this arrangement has created more orderliness and provided additional capacity, it is at best a makeshift and has by no means discouraged moths or made for the perfect system resulting from the installation of K-V Fixtures.

Through Years of Use

Those who are about to build should plan definitely for the installation and use of K-V Fixtures in nearly every closet in the house. The cost of the fixtures is

der, will not depreciate or become obsolete.

Provide
Beforehand

insignificant, the

i nstallation

simple. The installation, however, even by the housewife, is at

once permanent. The fixtures will

last always, can-

not get out of or-

mensions of the home can be saved. This means the saving of many, many dollars in construction costs, as any builder will explain. And this can be done without sacrifice of space in the bedrooms and living quarters of the home. In fact, there are hundreds of cases where plans have been altered, space saving closets installed, the outside dimensions of the home reduced, and the rooms actually made larger.

For Closets of Unusual Dimensions

The ideal Space Saving Closet is slightly wider than the shoulders of a man. To the underside of the full shelf is attached a K-V Fixture. These fixtures are made from 12 to 60 inches in length, thereby permitting their use in an extremely deep closet capable

of enormous storage capacity, or a shallow space that ordinarily could not be employed at all. Entrance to the closet is not possible or necessary, because the array of clothing suspended on hangers from the sliding extension bar slides forward at a slight pull, and the entire wardrobe comes into view.

A closet out of the past. Damp, odorous, moth in-Wrinkled suits and fested. mussed frocks. No wonder people were "clothes closet conscious," and rushed about slamming closet doors the moment the bell rang on the arrival of guests. A K-V Fixture—a few minutes with a screw driverand order could be brought out of the jumble, with everything as compact and neat as a wardrobe trunk. This closet, which belongs in a museum, could be made into a K-V Closet, which belongs in every modern home.

Cubby-holes into Wardrobe Trunks

The K-V Fixture, however, can be easily installed in practically all types of closets—large and small. square, rectangular or triangular. The small "cubbyhole" is transformed into a useful garment case in a moment, by the use of a screw driver, a few screws and a K-V Fixture of the proper length.

The Convenience of the Future

K-V Clothes Closet Fixtures are already in use in thousands of homes, apartments, hotels, clubs and apartment hotels. More and more are they becoming a part of the modernization of the Home of Now and Tomorrow, because of their recognized place in the present day desire for system, their worthy construction and value.

Secure them for Your Home

By all means make sure that your home has Space Saving Closets. Tell your architect and your contractor you want them. Tell him of K-V Fixtures, if he does not mention them to you. And if your local hardware store cannot supply you with these fixtures in the proper size desired, write direct to the factory—Knape and Vogt Manufacturing Co., Grand Rapids, Mich. In any event ask them to send you a very interesting little booklet entitled "The Clothes Closet and the Housewife." This booklet tells and shows in detail the advantages and conveniences of the K-V Clothes Closet Fixture, as manufactured by the Knape and Vogt Manufacturing Company of Grand Rapids, Michigan.

A Joy of the Modern Home-

Ever Hot WATER HEATER

Exterior View of the EverHot Junior

The beauty without reflects the quality within.

What It Is

The EverHot Automatic Water Heater is a simple, compact unit of extremely graceful design and beautiful finish. It is of the automatic storage type, having no coils or complicated parts. The entire outside surface of the boiler is utilized as heating surface, enabling the heater to function with the highest degree of economy.

The entire heater is insulated with a thick covering of rock wool, one of the best insulators known. The outer jacket shell is of terne plate (lead coated steel). This presents a very smooth, uniform surface for the application of the satin silver Duco lacquer. The fittings are nickel plated. The gas filter, burner pipe, fire door, legs, top, base and draft governor are finished in black baked enamel. The heater presents a most pleasing appearance and will add prestige to any surroundings.

The boiler is triple extra heavy, and tested to five hundred pounds hydrostatic pressure. It is galvanized by a special process which insures a much longer life than any ordinary galvanized boiler. The whole heater is built with the idea that it will last as long as the home.

The EverHot is not an assembled heater. It is made in our own plant and we are thus able to properly inspect the manufacture of every component part. Our aim is to build a heater that will make every owner an EverHot salesman.

Prices range from \$66.00 to \$145.00. There is a Size for Every Need. Write for catalog to the EVERHOT HEATER COMPANY, 5191 Wesson Ave., Detroit, Mich.

The EverHot semi-bunsen, non-flash-back, non-carbonizing burner.

A Joy of the Modern Home-

What It Does

—It gives you, in your home, the same kind of hot water service you expect in a high class hotel—without the premium.

The EverHot is entirely automatic. When first installed—light it and forget it. Its unfailing service is its only reminder of its presence. It responds instantly to the turn of any hot water faucet in the house, delivering clean hot water at the same pressure and in the same volume as the cold faucet delivers cold water.

It costs less than a modern gas range, or washing machine, yet renders a much greater contribution to the health, comfort and happiness of the home.

The economy of operation is one feature of the EverHot that greatly appeals. No gas is wasted—even the heat of the pilot light is utilized. The gas bill is directly in proportion to the amount of hot water used.

The EverHot is manufactured by one of the largest companies in the water heater industry. Each heater is fully guaranteed. The EverHot Heater Company has branches and sales offices in sixty-five principal cities in the United States and Canada. There is probably one in your city.

Prices range from \$66.00 to \$145.00. There is a Size for Every Need. Write for catalog to the EVERHOT HEATER COMPANY, 5191 Wesson Ave., Detroit, Mich.

Weather Strips Are Essential For Health, Economy and Comfort

How They Keep Out Rain, Summer's Dust and Winter's Cold

Weather Strips are no longer an after thought in building construction but are recognized as one of the prime factors in making structures livable and economical to maintain. The position they hold today is due very largely to the development of Metal Weather Strips in which Chamberlin was the pioneer. And how different this Weather Strip is from what we used to know as weather strips not so many years ago.

The old types of weather strips which we used to put on the windows and doors ourselves, or have a carpenter tack on for us, were made of

cloth, felt, rubber and even paper Although these ancient appliances helped make our homes a little more comfortable, yet at best they were only temporary makeshifts.

The Metal Weather Strip as Developed by Chamberlin

Metal Weather Strips, as developed by Chamberlin, have, on the other hand, entirely revolutionized weather stripping. They are made of non-corroding, rustresisting metals, such as zinc,

The loop tongue makes an air tight seal. Side strips cover the full runway and the corrugations 1/16 inch high reduce sliding friction.

bronze and brass. Not only are these Weather Strips permanent—not only do they fulfill all of the required weather stripping functions, but they permit windows to open and close smoothly; they keep out cold draughts, dust, soot and rain; they deaden street noises and prevent windows from rattling. And, in addition, they provide a definite economy. By

Illustrated above: 1—sturdy loop tongue of head strip; 2—interlocking meeting rail strip; 3—corrugated side strip; 4—broad metal sill strip.

keeping cold air out and warm air in, these Metal Weather Strips save from 15 to 40% in annual fuel costs and, at the same time, help to maintain healthful, uniform temperatures throughout the entire building.

Every door and window opening needs Metal Weather Strips. Many people believe that metal window sash do not require weather strippingthat only wood sash and doors are necessary in keeping out the elements. This is incorrect. As a matter of fact, there are unquestionably man &

A solid brass Pulley Guard reduces air leakage through the pulley holes.

types of metal sash which give less protection against rain, dust and air leakage than does the average unweatherstripped wood sash. The following gives a brief description of various types of windows and how Chamberlin equipment makes them practically airtight and weather tight.

The Sliding Window

In this type of window, the top and bottom, sides and meeting rail or center of windows must be weatherstripped. Without going into technicalities, the equipment can best be described, as follows: The edges of sash are grooved at their entire perimeter. Against the frame sides and top as well as

the sill, Chamberlin Weather Strips are carefully fitted, having a loop tongue which fits into the sash grooves. When the window is closed a complementary interlocking device seals the meeting rail crack. Raised corrugations on side strips minimize the area of sash contact when sliding up or down, thereby reducing friction to a minimum. Weather stripping by Chamberlin makes the window weatherproof, yet permits it to open and shut more easily. Pulley covers at the

pulley holes eliminate much air and dust leakage that can not be prevented by any other means.

The Hinged Window or Door

The Hinged Window (Casement) or Door is particularly in need of metal weather strip protection against both wind and rain. In many homes heating plants are being condemned because it is difficult to maintain comfortable temperatures. No furnace, however, can perform the impossible and in

One type of Chamberlin Equipment for In-opening Double Casements. 1 and 2—interlocking head and center strips; 3—interlocking hinge side strips; 4—heavy zinc double channel sill.

many cases the real reason why homes are cold and draughty is because cold air constantly leaks in at door and window openings-a condition which Chamberlin Weather Strips eliminate to your entire satisfaction.

The Casement Window

The Casement Window requires specialized weather stripping treatment. This Chamberlin has accomplished through 34 years of intensive

For further details and CHAMBERLIN METAL WEATHER STRIP CO., Inc., Detroit, Mich.

effort. The out-opening casement is protected either with a metal tongue which fits snugly into a groove in the wood sash or by spring bronze; while in-opening casements are equipped with special inter-

locking strips. For double casements, the centers are equipped with a weathertight interlocking joint protected by an astragal.

One type of sturdy, brass sill for in-opening casements.

Casement Sill Equipment

Perhaps the most vulnerable points of casements as far as rain leakage is concerned are the bottoms. Chamberlin has given the utmost care to sill equipment and its installation. It employs either a zinc, coldrolled bronze or brass channel to act as an efficient barrier against weather and water seepage. The outside wall of this trough

channel bears the brunt of the storm and prevents wind from blowing rain back against the interlocking joint. At the sill, the side strips are mitered with the sill strip—a very important feature.

Doors

Door openings are particularly in need of weather stripping. When a door is 36 inches wide and has a crack beneath it of only ½ inch, such an opening is equivalent to a hole 2" x 2". Warm air rises and floor temperature at best is apt to be uncomfortable, particularly to children while playing on the floor. Unweatherstripped doors cause draughts which unquestionably cause a large percentage of the colds to which so many children are

The new Chamberlin brass sill for outopening casements.

subject. Chamberlin door equipment eliminates such draughts entirely.

Inside Doors

Chamberlin also features as a regular part of its equipment, a device which is installed in the bottom of bed room, basement, kitchen, attic,

bath room, and closet doors. Chamberlin In-Dor-Seals on bed room doors, prevent the cold

Chamberlin In-Dor-Seals. The felt seal is lowered snugly to floor when door is closed and automatically raised when door is opened.

air let into the bed room at night from escaping into the halls and throughout the house. Chamberlin In-Dor-Seals also prevent heat from escaping into the attic—laundry steamand furnace dust from escaping up into your living apartments and dust from circulating into clothes and storage closets.

In kitchen doors they prevent the spread of cooking odors. Chamberlin In-Dor-Seals are fitted on the lower edge of the door. They operate automatically—a soft but firm felt pad lowering and fitting tightly against

the floor when the door is closed. This same felt pad automatically rises when the door is opened, allowing the door to swing clear of rugs and carpets.

Chamberlin Plasti-Calk

Chamberlin Plasti-Calk is essential where walls are of masonry construction for reasons identical with those which make necessary

Chamberlin Sill-Dor-Seal, 41/4 inch wide. Very attractive. Made of extruded brass—highly polished.

the use of Chamberlin Weather Strips. If you examine your window and door frames on the outside you will find a space all around between the casing and the brick. This opening is constantly admitting cold air, It allows soot to deposit behind the casings to such an extent that every

Extra wide Chamberlin Sill-Dor-Seal (6"). Gives a finished appearance to fine entrances.

gust of wind forces dirt to the inside, causing soot streaks or flashes on the inside walls. This deteriorates decorations very rapidly—while the water which deposits behind the frames in time will rot the wood. This condition exists in practically every stone, brick or concrete building. It is not due to materials or faulty construction but to per-

fectly natural causes. When the wood from which the frames are made absorbs moisture, it swells, and when it is dried by furnace heat or sun, it shrinks. Every building settles and that also causes

these cracks to show up which calking alone can seal. Cement and putty crumble away. Plasti-Calk remains plastic and adheres to any building material.

The need of calking is, of course, in addition to the need of weather stripping. Weather Strips seal the cracks between sash or doors and their frames. Calking is used to seal cracks

A 13/8" Sill-Dor-Seal for rear entrance doors.

which, in the case of masonry constructed walls, exist between frames and the surrounding masonry.

Chamberlin Equipment

Chamberlin equipment is installed exclusively by Chamberlin mechanics trained and supervised to work to the exacting Chamberlin standard and is guaranteed and serviced "for the life of your building".

How Chamberlin Plasti-Calk is applied in cracks between window and door frames and masonry.

Chamberlin equipment not only makes your home more livable and saves your fuel, but it increases the resale value of your home. It is a built-in feature that prospective buyers and tenants appreciate. You procure lasting satisfaction as well as the best weather stripping equipment that money can buy when you select Chamberlin. Write for complete liter-

ature and a free estimate.

THE USE OF FACE BRICK

Durability, Beauty and Economy in the Face Brick Home

There never was a time when the American people gave so much thought to the building of their homes, both on the practical and artistic side. There never was a time when so many beautiful small homes were being built. And in this development Face Brick is playing an important part.

The use of Face Brick in home building has, during the past five years, increased by leaps and bounds. In all parts of the country, in the smaller towns and in metropolitan centers, home-builders have discovered that, from every point of view, Face Brick gives them the greatest return per dollar spent.

This preference for brick is not a new manifestation. Ancient monuments, throughout the whole recorded history of man, reveal the structural merits of brick. While other materials used for structural purposes have proved susceptible to the destroying influences of the elements, on the score of durability brick has held its own, and, in fact, a little more. In his "Antiquity of Man," Sir Charles Lyell, the father of modern geology says: "Granite disintegrates and crumbles into mica, quartz, and feldspar; marble soon moulders into dust of carbonate of lime; but hard, well-burnt clay endures forever in the ancient landmarks of mankind."

Art has been partial to brick in expressing its finest architectural ideals for forty centuries. And now the modern face brick manufacturer has added an almost endless range of colors, thus infinitely extending the artistic possibilities of this material. While brick clays burn to three fundamental colors, gray, buff, and red, there develops in the burn a bewildering variety of hues, tones, and shadings from light to dark.

Besides these artistic and æsthetic values, there are the necessary practical values of strength and endurance which the varieties of Face Brick afford—a combination which renders them at once the most desirable of all the structural materials used for building-facings. Without doubt Face Brick offers the best investment the home builder can make.

Three essential things must be considered when one enters upon a home-building program: first, Utility; second, Durability; third, Appearance. Of course, the amount of money available must be considered, but even here the question resolves itself into that of best arrangement, greatest durability and finest appearance for the amount of means available. In other words, for the amount of money one has at his command he hopes to get into the building all the conveniences possible—as durable a building as possible—as beautiful a building as possible—all this whether he is building himself a home or whether he is building only as an investment.

An objection commonly raised to brick is the item of expense. To the prospective builder who has avoided using Face Brick because of the notion that it is high in cost, it will come as a pleasant surprise that it is exceedingly economical as a building material and within the means of the small home builder.

Comparative Costs

The following comparative costs are actual figures obtained in all parts of the country by manufacturers of face brick. All these figures are the bids for actual contracts by experienced contractors in various communities. The percentage of increase in cost of a face brick home over a frame structure is so small that it can hardly be considered in constructing a modern home. For example, a \$6,000 frame house, figuring the excessive cost at 6 per cent, would mean a \$6,360 face brick house.

Summary of Percentage Differences, 1910-1919

Year	Siding on Frame	Stucco on Frame	Brick Veneer	Brick on Tile	Brick on Common
1910	0.0%	2.9%	6.9%	10.7%	9.1%
1913	0.0%	4.0%	5.9%		8.1%
1915	0.0%	1.6%	4.9%		6.9%
1919	0.0%	0.5%	4.4%	6.5%	6.1%

Considering the durability, added charm and beauty of brick, together with the expense saved in upkeep, economy is decidedly in favor of a brick structure. Appraisal engineers have estimated the depreciation on a brick house at 1 per cent a year beginning after the fifth year. But against other materials it finds an easy conquest and exacts a toll of 2 per cent per annum. Suppose we take the highest disparity in cost, 9 per cent, as an example. On a house costing \$6,000 the difference in favor of the frame building is \$540. A paint job at the end of the fifth year has reduced the figure to \$340. Depreciation has annually taxed the building at the rate of \$120 or \$600 for the five years. By the end of the fifth year the builder of a frame house is the loser by \$260; but, if we made the comparison even, a brick home is a superior investment because it is fireproof, weatherproof and an everlasting monument to the wisdom of the owner's choice of materials.

Other advantages of brick over the frame structure are fire-safety, low insurance rates, comfort and health. A brick wall operates against excessive heat in the summer and against excessive temperature changes in the winter. In this respect it has very decided advantages in the economy of fuel as well as in comfort and health.

Bonding

No other building material can approach Face Brick in the possibility of color schemes for the wall surface, for they are an integral part of the enduring brick. But in your choice of texture and tone of the brick themselves, you have by no means exhausted the possibilities of artistic effect on the wall surface. You still have to consider the vital influence of bonds and mortar joints on the result.

A. F. B. A. Six-Room House, No. 627-A
As built at Park Ridge, Illinois, in the interest of "Better Homes
in Chicago"

Bond in brick work is the overlapping of the brick one upon the other, either along the length of the wall or through its thickness, in order to bind them together in a secure, structural mass. Units are shifted back and forth so that the vertical joints in two successive courses do not come in line. In other words, the brick are laid so as to break joint, the whole forming a natural bond or structural unit, giving strength to the wall.

When a brick is laid lengthwise of the wall, thus showing its long, narrow dimension, it is called a stretcher. If its length extends back into the wall so that its short dimension shows on the surface, it is called a header. This stretcher secures strength in the length of the wall. The header secures the strength of the wall throughout its thickness.

Up to comparatively recent times, brick bond was used only to secure the strength of the wall, but in the seventeenth century it occurred to European builders that there was an artistic possibility in the bond as it appeared on the surface. They began to see the fine tracery of the mortar joint running over the background of the brick, and by experiment found that this could be varied into very attractive patterns by different arrangement of the brick bond. As a result of this, there have been developed mainly three different types of bond which are used at the present time, with various modifications, to secure attractive effects in pattern.

The first and most obvious of these bonds is called Running or Stretcher bond (Fig. 1). This bond has the merit of being very strong longitudinally, but lacks

ig. 1. Running or Stretcher

Fig. 2. English

Fig. 3. English Cross or Dutch

Fig. 4. Flemish

Fig. 5. Common

Fig. 6. Header

Fig. 7. Two Stretcher Garden Wall

transverse strength; consequently, it is modified into what is called Common or American bond by laying a course of headers about every sixth course (Fig. 5). As a type of Running bond, headers instead of stretchers may be used (Fig. 6). As this bond is very light structurally, it should not be laid except for panels or other ornamental effects. The English is made up of alternating courses of stretchers and headers (Fig. 2). It is modified beautifully by breaking the joints of the successive stretcher courses; this is called English Cross or Dutch bond (Fig. 3). This produces a very pleasing series of Greek crosses and ripple lines up and down the surface of the wall, and the English brick-builders claim for it the great merit of giving transverse strength to the wall.

The Flemish bond (Fig. 4) is secured by laying each course in alternate stretchers and headers, the header resting upon the middle of the stretcher in successive courses. This produces a very attractive pattern and is a favorite among the builders because of its artistic effect. It may also be modified in various ways to produce other pattern effects. Thus is the Garden Wall bond made by laying the courses with from two to four stretchers alternating with a header (Fig. 7).

Mortar Joints

Figure 8 details the differmortar joints used in brick work. Four elements must be carefully considered in choosing mortar joints, viz., color, texture, size and kind. The wrong kind of mortar joint will destroy the beauty of the brick. On the other hand, if it is properly chosen it will bring out the fine shades and tones of its natural beauty. Colored mortar joints may be produced in two ways; First, by the use of natural colored sand, ground granite or other stone; Second, by the use of artificial mortar color.

FIG. 8. MORTAR JOINTS

To assist home-builders in planning their homes, the American Face Brick Association has issued the following helpful and interesting booklets:

- ''The Story of Brick'' is an attractive booklet with beautiful illustrations of modern homes, and discusses such matters as Comparative Costs, Basic Requirements in Building, The Extravagance of Cheapness, and kindred subjects. Sent free.
- "Face Brick Bungalow and Small House Plans" embrace 128 designs of Face Brick bungalows and small houses. These houses are unusual and distinctive in design, economical to build, and convenient in floor plan. Issued in four booklets, showing 3 to 4-room, 5-room, 6-room and 7 to 8-room houses. The entire set for one dollar; any one of the books, 25 cents. We can supply complete working drawings at nominal prices.
- "The Home of Beauty" contains 50 designs of two-story, six-room Face Brick houses, representing a wide variety of architectural styles and interior arrangements, selected from 350 designs submitted in a nation-wide Architectural Competition. Sent for 50 cents. Complete working drawings for these houses at nominal cost.
- "The Home Fires," a most attractive fireplace booklet, with many designs, gives full direction for fireplace construction. Sent for 25 cents.

Address, American Face Brick Association, 1796 Peoples Life Building, Chicago, Illinois.

Size 36'0" x 24'0"

"The ALFORD"

6 Rooms, Bath and Sun Parlor

A BEAUTY that has something of an old world flavor marks the "Alford." Many interesting roof angles give the necessary distinction to this home. The entrance is architecturally perfect. The floor plan deserves a thorough examination for there are many nooks and crannies and other attractive features that are not noticed at first glance. A home to be desired. Built of Face Brick.

Size 28'0" x 31'0"

PORCH DINING ROOM IS'5" × 14'9" LIVING ROOM REC HALL PORCH 28'0" × 8'0"

"The ARTEMAS"

6 Rooms and Bath

BEAUTY, permanence and comfort at moderate cost, is the desired end. The "Artemus" with its face brick sides and stucco dormer has all these qualities. In addition there is a built-in mail box, dining nook and bookcases flanking the fire-place.

Build Chimneys—Not Fire-Traps!

AND INCIDENTALLY

SAVE 25% OF YOUR FUEL BILL

The Truth About Flue Lining

as told by the

Official Publication of the Building and Loan Associations of America

"To understand clearly the exact reason back of the terrifying losses both in lives and property, to say nothing of the untold grief and discomfort the home owner has had to bear, let us analyze past forms of chimney construction that have in the majority of cases been 8x12 type lined with flue lining.

Flue lining was a hoped for improvement over past evils and was first offered years ago. No general improve-ment has been made in its quality since its introduction. Not until public pressure came into the picture were the actual facts surrounding the addition of flue lining in chimneys analyzed. Fire clay flue lining is at least a brit-tle, cumbersome unit, often warped and not true, that does not thrive or improve in value during the delivery to the job. The chance of breakage in the loading and unloading of this lining is generally recognized. Also there is very little fire clay flue lining manufactured and distributed, and clays of inferior quality are very generally used.

Next we have the problem of actual construction. This is difficult for the builder due to the irregularities of the flue lining which due to the process of memory construction.

flue lining, which due to the process of manufacture, can-not be brought through true so that one lining will stand

squarely on another.

Next the furnace installer must make an opening into the chimney wall for the smoke pipe of the furnace. He could carefully chip his way through the lining and then cement the opening, but in this case "punching" his way

One Course of Holland Chimney Brick

through lining walls is quickest and easiest and more popular. The result of this "punching" process is bound to show a cracked lining at one point where tightness in construction is most vital. Assuming for the sake of argument, that the chimney lining has remained intact even after the loading, hauling, unloading, construction and the

after the loading, hauling, unloading, construction and the "punching" process of some furnace installer, we then find the furnace of the home taking up the burden.

On a cold zero night, we find the house temperature drop to approximately 50 degrees. In the morning draft and dampers on the furnace are opened in order to obtain desired house temperature. This results in heavy firing during which time heat in the amount of approximately 1000 degrees or more is thrown directly into the chimney 1000 degrees or more is thrown directly into the chimney, resulting in a marked expansion of the flue lining followed by contraction of lining when the furnace cools off. Continuous heating and cooling will take the life out of the average flue lining and cause it to break down.

Soot, almost pure carbon, lodges in the corners of the square flue lining construction constantly paving the way for another damaging chimney fire. Masses of soot deposit cling to the corner walls and may momentarily ignite.

posit cling to the corner walls and may momentarily ignite from a spark from the furnace and burst into a roaring fire, and in turn will find its way through cracked flue lining into the roof line or attic of the house."

Heavy Furnace Firing Will Crack Down Flue Lining as Pictured Above

The New Round Flue Holland Safety Chimney

The new chimney is constructed with four specially designed brick, each interchangeable and geometrically correct. Three sizes of flue are possible, the 8", 9" and 10". These three sizes take care of practically any demand in residential work. Regardless of the size of flue, one joint only to a side is found and the interlocked joint prevents any leakage of sparks or gases. design of the brick makes possible a perfectly square outside wall, and at the same time a smooth, round interior surface that affords the ultimate owner safe and economical features not found in the square cornered chimney.

Compare the square dead corner of past construction with the inner surface of the round flue where the inner surface is constantly being wiped clean of soot deposit by the friction of whirling,

The New Round Flue Holland Chimney Under Construction

"Corbelling"-Showing Mason Bringing Fireplace Flue Over to Meet Furnace Flue

ascending gases. Because of this friction, soot cannot collect, and where you have no soot collection, you can have no cause for chimney fires. The gases follow the exact path of the interior chimney wall in the Holland Safety Chimney construction, and without back drafts or eddy currents follow the interior surface in a whirling, ascending column of warm air. Engineers agree that the new round flue Holland Safety Chimney will within a comparatively short time become exclusively standard equipment nationally.

Interflue Seepage impossible with Holland Chimney Brick

Probably one of the greatest causes for a lack of efficiency in double flue construction with past materials has been the fact that gases from the furnace flue found openings for seepage into the fireplace flue. This is not hard to understand when we realize that in the majority of cases no brick work is used between flues but rather two flue linings are placed side by side.

A homely illustration of the result of seepage from one flue into the other could probably be made by puncturing the wrapping of a cigar and attempting to smoke it. The sub-draft created by the punctured wrapper is sufficient to so tear down the efficiency of the main draft that proper smoking of the cigar is an impossibility.

Now in the new round flue Holland Safety Chimney a solid wall of brick masonry 8" wide separates the furnace flue from the fireplace flue. Each flue under this construction is a positively separate unit and functions individually. Architects, contractors or engineers will emphatically bear us out when we state that this feature alone would place the Holland chimney on a plane far above any other type of chimney construction. When building a double flue, build with the Holland chimney brick and protect the home owner against the home discomfort that past forms of double flue work have given him.

Sweeping Public Approval

The new round flue Holland Safety Chimney has been presented in practically every important city in the midwest and near east. It has been presented to State Boards, Fire Prevention Departments, Architectural Bureaus, etc., and without exception in those cities in which the construction has been analyzed, sweeping endorsements follow. For example, we have on file letters (copies of which we would consider it a privilege to send you) from building departments, or other equally important sources from such cities as Chicago, Indianapolis, Cleveland, Columbus, Cincinnati, Milwaukee, State of Illinois, Buffalo, N. Y., Pittsburgh, Pa., and other equally important points.

Then again, because of the sensational acceptance of this product, trade papers such as the American Builder, Building Age & National Builder, American Artisan, Fire Protection Service, Building Association News, Building Materials, Building Supply News, Brick & Clay Record, Michigan Contractor, Building Witness, and many other similar publications have seen fit to give us space up to three pages of their valuable editorial space in the enthusiastic discussion of this solution to past residential chimney evils. Copies of these magazines, too, are on file in our office and a two cent stamp with a request for them will bring them to you in the first mail.

If you will refer to page 116 of the Plan Book, you will find the new round flue Holland Safety Chimney specified and the plan drawing will give you some conception of the safety, efficiency and economy of this new chimney construction.

DEPENDABLE WATER SERVICE AT LOW COST

For Your Home, Farm or Country Place

By J. C. MYERS, Vice-President

THE F. E. MYERS & BRO. CO., ASHLAND, OHIO

Out where the city water mains come to an abrupt end—Out where suburban and country homes appear like magic over night—is the place where the modern water system with its accompanying conveniences

plays an important part in the life of folks who live there.

Not so long ago an elevated tank located in the attic, on the roof, or supported by a tower, was the reservoir from which the water supply for the home flowed by gravity to all parts of the house, surrounding grounds and buildings. But the tank was always becoming empty. Some member of the family had to fill it by pumping the water from the well or cistern. This opera-

tion involved considerable labor which was more or less annoving and unsatisfactory. Then too during the winter months when the temperature took a sudden drop, as it frequently does, there was always the possibility of a

SELF OILING

RESIDENCE

WATER SYSTEM

WATER LINE

Fig. 2181—Myers Self-Oiling Home Water System com-plete ready for service. Two Sizes, 200 and 300 gallons per Hour Capacity.

bursted tank with its accompanying flood of water through the house.

Because of the uncertainty of a system of this kind and the labor it involved many folks de-

pended on outside, kitchen or porch pumps for their water supply and most of them used outside toilets for sanitary purposes.

In those days there was no other way than this but with the coming of the home power and lighting plant and the extension of city service power

and light wires to suburban and rural communities the modern water system sprang into being and soon revolutionized living conditions in suburban districts. A pump, a motor, a pressure tank, an automatic switch, fittings and accessories to complete the outfit, assembled and connected with suction line to the well or cistern, and hooked up with service or home power system wires, solved the water problem and placed suburban life on the same plane as city life in as far as modern home conveniences are concerned.

> Myers Water Systems were pioneers in this field. Long before many of those who are now manufacturing water systems started operations, Myers Water Systems were being installed and used in suburban and country residences. in cottages and summer homes, and in numerous other places where city water service was not available. Like every other new innovation, the missionary work for introduction had to be carried on. Here and there a water system would be installed. If it gave satisfaction, the neighbors soon became interested and they too became pur-

Fig. 2106—Myers Home Water System installed in basement. Myers Water Systems are designed for both inside and outside installation.

veloped or the service was not entirely satisfactory, or this, that or the other thing happened, the water system for the time being at least received a "black eye" and its adoption in that vicinity was a slow proc-

Water Systems have continued to lead the way. Originated, designed and developed by experts, produced in a factory where modern equipment and practices prevail, distributed, sold and installed by leading dealers, plumbers, contractors and builders throughout this and other lands, they provide dependable water service on a highly economical basis for those who

thro or b in the control of the cont

through necessity or by choice reside in districts where the city water main

has not as yet penetrated.

But this is not quite all of the story. Many problems and conditions had to be

met and solved before water systems would prove universally satisfactory. Perhaps your neighbor who lives across the street uses again as much water as

you do every twenty-four hours—perhaps you pump your water from a shallow well or cistern while he has a deep well from which his daily water supply must be obtained—perhaps you prefer a water system.

prefer a water system witha pressure WATER SYSTEM Fig. 2253—Myers Self-Oiling Deep Well Water System. desire a water system with sufficient volume to permit of sprinkling, washing the car, watering

-perhaps you

stock, fire fighting and similar uses while he is not interested in this service at all. And so the demand goes with a new problem or a different condition to be met and overcome with a type or style of pump that will successfully render the service required of it.

It will readily be seen that one or two types of pumps cannot be expected to meet such

widely varying conditions. Installation—depth—vol-

ume—operation—upkeep and maintenance —uniform, long time service—enter into every water system sale, and all of them have been considered in the development of the complete line of

A White Seat at a Moderate Price

that will give long service

THE building world has long regarded the Whale-bone-ite Toilet Seat as the most durable toilet seat made. Public buildings, schools, hotels, hospitals the country over are equipped with this seat.

Realizing the tremendous demand in modern residential building for a high-grade white seat, the Brunswick-Balke-Collender Company, manufacturer of the Whale-bone-ite Seat, several years ago undertook to perfect a white seat that would not only be supremely beautiful but which would be durable as well.

The result is the Brunswick White Seat, which in an astoundingly short period of time has won acceptance on the part of plumbers and contractors everywhere.

The long experience of the manufacturers in making the Whale-bone-ite Seat has enabled them to put into the Brunswick White seat quality far beyond its price. This seat has the same construction which in the Whale-bone-ite Seat has won the en-

The BRUNSWICK

dorsement of architects and builders the country over.

Not simply the basic construction but the exterior of the Brunswick White Seat is unusual. This new seat has a glasslike, highly polished Brunsoid surface which is the result of long research...really a remarkable discovery.

Matches other fixtures

In perfecting this surface, the makers of the Brunswick White Seat have succeeded in getting a white seat which exactly matches your own bathroom fixtures. An extremely important detail in your new bathroom is to look attractive.

The Brunswick White Seat is guaranteed for five years. It will not crack, craze, chip or turn color. The heavy, concealed nonfouling hinge is accurately machined and heavily nickel-plated.

Prices of the Brunswick White Seat are remarkably low...only a little more than the very least you would expect to pay. The Brunswick White Seat is made in various designs to meet every need. It fits all standard make of fixtures.

Ask your plumbing contractor

Your plumbing contractor can obtain this seat for you. Ask him to let you see it. Insist on this uniquely modern, high-grade seat and accept no substitute. On request, we'll mail free a beautifully illustrated booklet showing the Brunswick White Seat in various styles. Address Dept. 93, Seat Division, The Brunswick-Balke-Collender Co., 623 S. Wabash Avenue, Chicago.

Improvements for the Lawn and Garden

WE HERE illustrate a few ornamental wood fences as suggestions to those who would beautify their lawns and gardens.

Style No. 109 Ornamental Wood Fence

WITHOUT a garden or lawn round it the home is never quite complete and without attractive enclosures the garden is never quite complete.

AGOOD idea is to separate the flower garden from the vegetable garden with a lattice fence over which vines can grow.

SHOWING the home at its best is accomplished only by careful preparation of the lawn and garden with appropriate fences and enclosures.

IF YOU have special ideas of your own which you want worked out, our Architectural Department stands ready to aid you.

Front Entrances and Exterior Doors

THE entrance design is the index to the architecture of the home itself and a selection of the design should be carefully considered.
